Experience

Cyclotron <i>Trainee</i>	March 2026 — Present <i>On-Site</i>
- Automating enterprise workflows using LangChain-based AI pipelines to streamline business operations and reduce manual effort. - Developed an end-to-end workflow automation system that processes customer emails, extracts quote-related information, and generates structured customer and vendor quotations in Excel format. - Built intelligent document and email processing workflows integrating LLMs, prompt engineering, and data extraction techniques for automated quote generation. Tech Stack: Python, LangChain, LLMs, Excel Automation, Prompt Engineering, Workflow Automation.	
Brillio <i>Data Science Intern</i>	Sept 2025 — March 2026 <i>On-Site</i>
- Built and automated internal business functions (Legal, Accounts Payable) using agentic AI solutions to reduce manual effort. - Designed and collaborated on AI agents to orchestrate workflows, improve decision-making, and streamline enterprise processes. - Implemented a Retrieval-Augmented Generation (RAG) framework to retrieve relevant SOPs, policies, and historical records to assist agents in data validation and decision-making. - Designed and implemented a RAG-based policy validation system to interpret and validate Corporate Credit Card spend policies through natural language queries, leveraging Python, Azure AI Search for vector retrieval, and Azure OpenAI for LLM-powered responses. Tech Stack: Python, Streamlit, LangGraph, Agentic AI, LLMs, Azure, PostgreSQL, Azure Data Studio.	

Projects

AI Legal Contract Analyzer <i>Flask, Legal-BERT, Hugging Face, Gemini API</i>
- Fine-tuned a Legal-BERT model for contract clause classification, deployed the model on Hugging Face, and integrated it into a Flask-based web application to enable automated clause labeling and structured contract analysis. - Integrated Gemini 1.5 Flash (Gemini API) to generate concise summaries and contextual natural-language explanations, and implemented an end-to-end pipeline for document upload, preprocessing, model inference, and structured result visualization.
FixiAgent – Multi-Agent Fixed-Width File Processing System <i>Python, LangGraph, SQL, OpenAI</i>
- Architected a LangGraph-based multi-agent system to automate parsing of fixed-width files using schema definitions from Excel, leveraging custom-built tools including an Excel schema reader, fixed-size file parser, and database writer. - Designed an end-to-end ingestion pipeline that dynamically interprets field lengths, positions, and data types from schema files and maps structured outputs into relational database tables for scalable legacy data processing.

Skills

- Programming & Query Languages:** Python, SQL, HTML, CSS
- Libraries & Frameworks:** Pandas, NumPy, scikit-learn, Matplotlib, Hugging Face Transformers, LangChain
- Tools & Platforms:** Apache Airflow, dbt, Snowflake, Firebase, GitHub, AWS
- AI & ML Skills:** NLP, RAG, LLMs, Prompt Engineering, Agentic AI, LangGraph
- Soft Skills:** Problem Solving, Communication, Team Collaboration, Time Management

Education

Vishnu Institute of Technology , B.Tech in Computer Science (AI & Data Science) CGPA: 8.83 / 10	2022 — 2026
NRI Junior College , Intermediate (MPC) Marks: 962 / 1000	2020 — 2022

Certifications & Achievements

- Semi-finalist in Spark Tank 2024 for *EduSwap* project
- Contributed to Smart India Hackathon projects on Fake News Detection and Coal Mine AI Monitoring
